

Introducing Single Face Rolls

Taking a Traditional Product and Adding Value

ICI's Trademark coating system I-COAT™ will convert your standard Single Face Roll into a valued added product.

Color Coating

- ▶ Select a PMS color code or a customer's custom color and ICI will produce Single Face rolls in a rainbow of colors.
- ▶ Add a top coat varnish to enhance gloss and appeal.
- ▶ Bold, Bright and Uniform application to expand your color choices!

Functional/Barrier Coatings

Single Face rolls now available with unique performance characteristics!

- ▶ Water Resistance
- ▶ Abrasive Resistance
- ▶ Grease & Oil Resistance
- ▶ Static Dissipative & Conductive Coatings
- ▶ Corrosion Inhibitors

Specialty Coatings on Request!

ICI is ISO 9001:2000 certified and fully equipped with an independently-operated testing facility. North American Testing Services (NATS) will conduct all of your testing requirements within a professional and confidential environment.

More than just a corrugator!

INDEPENDENT

Corrugator Inc.

Introducing Single Face Rolls

Independent Corrugator (ICI) has long been recognized as a premier quality supplier of Single Face sheets to the laminating industry. After extensive market research, ICI has now invested in equipment and customer service to produce and support the production and sales of Single Face rolls — with distinctive differences.

What Sets ICI Apart!

Single Face rolls offered in:

- ▶ B flute roll configuration
- ▶ Micro flute E and F
- ▶ Color coating of both substrates
- ▶ Functional/Barrier coating of both substrates
- ▶ White liners

The B Flute is a smaller flute profile but allows 6 more flutes per lineal foot.

On a 250 ft. roll this translates into 1500 additional flutes per roll. More flutes... more surface protection!

Smaller Roll Diameters

With ICI's unique manufacturing process, B flute rolls are produced with a tightly wound roll, thus picking up 2-3" in roll diameter compared to existing competitors.

Inventory & Shipping

The smaller diameter rolls of B flute allow for 6 piles per row with no overhang on pallets. Less warehouse space required, and more rolls per truckload in shipping. The tighter wound rolls allow for storage of rolls on their side with less crush and no telescoping.

More than just a corrugator!
